What's New in the Photoshop 2022 (Version 23.4.1)?

Designing a Website Graphic Elements • Photoshop is used to design, modify, and save images. • Photoshop Elements can perform some of the functions of Photoshop, such as painting, drawing, and photo retouching. Typography • Photoshop can be used to create text • Photoshop Elements has Font Book which lists all the fonts Web Graphics • Photoshop can be used to create graphic elements used in web design. Some Photoshop features are only available in Photoshop. For example, the text layout engine and vector art tools are available only in Photoshop. Faster with Photoshop • One of the biggest benefits of Photoshop is that you can change the design of the page being viewed and see the results instantly. This is especially useful when you need to make slight adjustments to a design before going live. See the results immediately • All changes to a page, including any placeholders, are saved while you work. If you're designing a landing page, you'll be able to see what the landing page would look like when a customer actually visits your site. This is not true for standard web pages. Edit multiple elements simultaneously • When designing web pages, you may need to edit more than one element. In some cases, you may also need to change the layout of an element. By using the Edit Multiple Elements feature, you can make changes to multiple elements simultaneously. Make minor changes in real time • Photoshop has a zoom tool that allows you to view a page at 100%, and also zoom into a smaller portion of a page to make changes. Save multiple images at once • You can use Photoshop to create, modify, and save multiple images at once. Elements for Websites • Some of the elements that are used for web design are too complex for Photoshop Elements. Photoshop Elements has tools that are similar to those used in Photoshop. For example, the Text Layout tool can be used for creating text. Embed Flash • Flash can be embedded directly into web pages without the need to create a separate image file **After working with Photoshop for about 10 years, I can testify that Photoshop is a great tool but I don't use it as much as I should. I think I may be at the stage where I need to learn Elements or another tool such as Illustrator. Are there alternatives
