" In the scene, Vergara and other women wearing lingerie, catsuits, and lingerie gowns appear to have sex with multiple men in various locations. It is unclear to the casual viewer who the performers are or what the storylines are behind these scenes. As this is an English-language website and there are no words of explanation in Spanish, I am posting this video in English with the hope that someone has an explanation and can point out to me who this woman is. The video does not show any faces or names, but it does show a lot of nudity and sexual activity. For now, I am posting this and my original question and wondering if anyone has seen this video and can identify the woman. I did not include the video in my post, but would like to include it in this discussion. A: I'd like to point out that this video is in Spanish, but I think we can extrapolate the scene. In the scene the woman is Sofia Vergara, of course. If you watched it you know that it was a fake scene for a "Las viejas putas" tv show in Peru. I tried to find other pictures of her, but couldn't find any. If anyone could find some better picture of her than the one that I found I would appreciate it. She was playing the role of "La vieja puta" in the telenovela "Por las noches de Chile" (for Chilean tv) and is one of the stars in it. It was a huge success and she got a sort of award for it. From the video I see the woman has a very eccentric appearance which fits the part of La Vieja Puta. But I cannot be sure she was the right person because the woman in the movie is very different. However, I feel that she was the right person because if you look carefully at the scene, the woman is eating sandwiches of an unusual colour ( I think the ones that she was eating in the scene) and I saw this picture in her Instagram and the woman in the movie is wearing that exact same sweater! She is a well-known model in Latin America (Mexico, Chile, Colombia, Argentina) and has done several other movies and commercials. Q: perl How do I split a string into an array with each element separated by a colon? I have a string \$string 82157476af
